

Computer Recommended Requirements (Trotec & Vision Engravers)

When using a more powerful computer the graphics are generated and displayed faster and the computing times and the data transfer to the laser are reduced. Please note that due to the rapid rate of change in information technology, we anticipate that hardware and software competencies will be updated on a regular basis.

The computer to be used must be dedicated to the machine. No other software or equipment is to be installed on the same computer.

Operating System: Microsoft Windows 10 64-bit (Operating system to be FULLY updated)

Processor: Intel i5/i7/i9 2.50GHz or faster

Memory/RAM: 8 GB RAM or greater

Hard drive/Storage: 256 GB hard drive or larger (Preferably solid-state for performance)

Display: 1600 x 900 resolution monitor or greater (16:9 Aspect ratio, 24-bit colour depth graphics processor)

USB Port: 1 or more (NO USB HUB's to be used), USB cables limited to max 5 meters, no extensions

Ethernet/Network: 1 x Ethernet (RJ45) for equipment (Additional required if used for internet connection)

Additional Requirements:

Local Administrative privileges for installation and running of the software

CorelDRAW Graphics Suite (not standard or student version) or other vector-based design application if required (to print/export to JobControl etc.)

Adobe® Reader 9.0 or later (for manuals)

Internet Connection

Required for various reasons:

Remote support (Using TeamViewer)

Updates required during the installation of software

Trotec Ruby Servers if Trotec Ruby is used

Ongoing updates of the software and operating system after initial installation

The above-mentioned recommended requirements are to avoid any delays regarding the installation of the software and training. Updating the operating system or any software while doing the installation of our software takes up valuable time out of the training.
